

Lake Superior is NOT an Ash Tray

**Cigarette Butts
On The Ground
End Up In
Our Waterways
Through Wind
and
Storm-water Runoff**

Cigarette butts release nicotine, cancer-causing benzenes, heavy metals and other dangerous compounds into the water.

The chemicals in cigarette butts are deadly to fish. They have been found in the stomachs of birds, fish and other animals that mistake them for food.

Cigarette butts are 95% plastic (cellulose acetate) and can take up to 15 years to break down.

Cigarette butts may seem small, but with an estimated 4.5 trillion butts littered worldwide every year, the toxic chemicals really add up!

**Help make Thunder Bay and Our Waterways
Clean, Green and Beautiful!**
