Dear Stakeholder:

As an identified stakeholder in the Thunder Bay North Harbour Sediment Remediation Project (TBNHP), you are being provided with a copy of the final Sediment Management Options report as prepared by Cole Engineering. You can find additional information including FAQs about the project at www.ecosuperior.org where you can also provide comments.

This report brings us one step closer to taking action on the contaminated sediment in Thunder Bay's North Harbour, an important part of protecting our Great Lake—Lake Superior!

If you have any questions about the report or the project, I encourage you to contact EcoSuperior at your earliest convenience. We are planning another Open House event in early October when you will have another opportunity to discuss the project with representatives from Cole Engineering and the Steering Committee.

As we move forward in the public consultation process, we are looking for your thoughts and reactions to the sediment management options presented in the report. I will be contacting you to document any comments, concerns or questions you may have with regard to any of the options presented.

We sincerely appreciate the time and consideration you are contributing to this project, and look forward to your response.

Jamie Saunders, Program Coordinator
