

Shower Power

Choosing personal care products wisely

Senior elementary students begin to have independent buying power and experimenting with more personal care products. But do they have all the information they need to make informed choices? Students learn about the basic health and environmental concerns around personal care products before rolling up their sleeves to make a safe, simple, natural body scrub to take home.

This program fits with the Ontario Grade 5 & 6 Science curriculum and also links well with other courses (ie: Media) and special events (ie: learning how to make a personal care product for school fundraisers).
