

# WILD ABOUT WORMS

## GRADES 1-8 PROGRAM

Food waste is a large problem in Canada, but it doesn't have to be. Primary and Junior students will focus on how we can divert food waste from our landfills. Intermediate students will learn about the cycling of matter and how waste contributes to climate change. All students will learn about mitigating the issue of waste in the environment through composting and vermicomposting.

**OPTIONAL :** EcoSuperior supplies all the components needed for you to create and care for your own classroom vermicomposting system. If you are not interested, please let us know. We will still bring one of our own vermicompost bins so students can experience the wonderful world of worms!

### CURRICULUM CONNECTIONS

#### Grade 3

Earth and Space Systems:  
Soils in the Environment  
**Overall Expectation E1.**

#### Grade 5

Earth and Space Systems:  
Conservation of Energy and Resources  
**Overall Expectation E1.**

#### Grade 4

Life Systems: Habitats  
and Communities  
**Overall Expectation B1.**

#### Grade 7

Interactions in the Environment  
**Overall Expectation E1.**

### LEARNING GOALS

We are learning about reducing waste through composting.

Please contact us at [education@ecosuperior.org](mailto:education@ecosuperior.org) if you have any questions regarding our programs.
